Abstract

An audio/video device volume controlling method and apparatus, comprising: a microcomputer, a auto level control detector, a volume controller, when the selection control signal from the microcomputer indicates an auto gain adjustment mode, the auto level control detector is activated, when the selection control signal from the microcomputer indicates a manual gain adjustment mode, the auto level control detector is de-activated and the gain of an amplifier is controlled in response to a volume control signal. An OSD controller for receiving the display data for displaying gain adjustment modes and gain magnitude on a displayer.
